

# KAA Camper trailer 2020

Unzip tent weather cover.

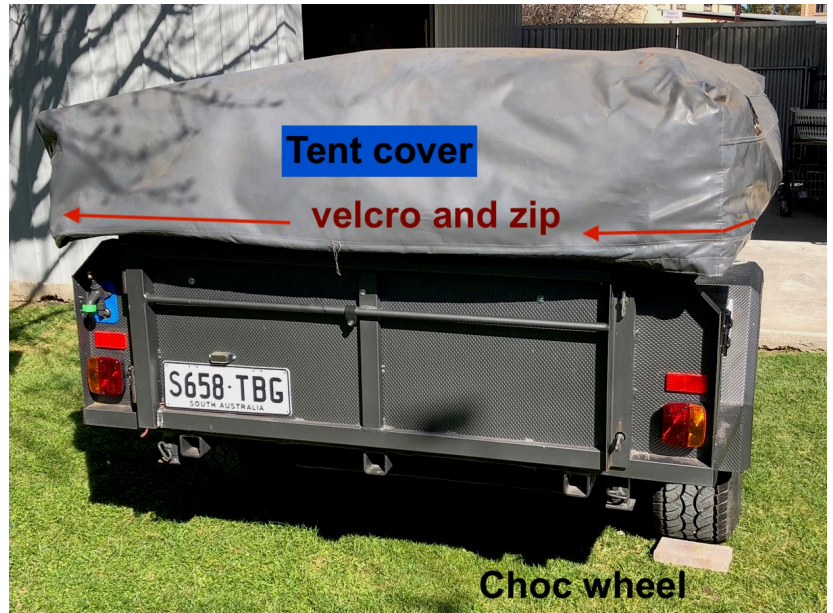

Place down down tarpolin on ground wher the tent floor will sit.

Pull and drop tent floor out over tarp.

Peg tent floor next to the trailer the pull tight the floor at other far end to take slack out of the floor.

Once the floor is secured, place a extend the two vertical supports.

Extend them till canvar is tight.

The second tent support bar is extend up till the canvar is tight

Time to get out the annex pole bag.

Unback annex pole bag and lay out the poles as in the plan.

Push short tent roof tubes onto the black x4 spigots.

connect the 4 roof poles and lay on ground.

Pull the annex roof down off the tent roof. Starting with the tallest bar and inset the vertical poles adding the end supports in between as you go

Add end support ropes as needed to hold the structure up.

the pole closest to the kitchen will have to be put on an angle

Put down ground sheet in annex area if required.
